The following is an examiner's statement of reasons for allowance: As to claim 1, the prior art does not teach or suggest a solid-state imaging device having a symmetric readout operation comprising: a first readout operation for reading first electric charges from a first group of photoelectric converter element rows which have an asymmetric distribution with non-readout rows of unequal interval in the column direction into said vertical charge transfer channel regions; a jxn-rows transfer operation for transferring the read-out first electric charges jxn rows after said first readout operation, where j is an integer greater than one; and a second readout operation for reading second electric charges from a second group of photoelectric
